PROFESSIONAL SUMMARY

I am a third-year Software Engineering student at Al-Zaytoonah University of Jordan and a Full-Stack Developer specializing in .NET and Angular, with a strong passion for UI/UX and Graphic Design. I believe the best digital products are created when design and development work together from the very beginning, so I enjoy building ideas and designing them simultaneously rather than treating them as separate phases. Driven by genuine passion for technology, I continuously learn, explore emerging tools and modern technologies, and refine my skills in both software development and design. I am committed to delivering clean, practical, and high-quality solutions that combine strong functionality with outstanding user experience, aiming to be recognized for the quality of my work before any job title.
